

# Security Awareness Training as a Service

## Channel Partner - Overview

### What is Security Awareness Training as a Service (SATAaS)?

One single 'click' is all a cybercriminal needs to hold your customer's business and data at ransom. A security breach can not only be a devastating hit to productivity, but also finances and reputation. With roughly 1.5 million phishing websites created each month, how do you help your customers and its users stay diligent and protected?

HPN's Security Awareness Training as a Service (SATAaS) is designed to empower the most vulnerable asset; users. With SATAaS, we have coupled state of the art security training with highly certified security engineers to allow your organization to influence behavior, mitigate risk, ensure compliance, and help protect your customers. Safety starts with awareness, and awareness starts here!

### Benefits of SATAaS To Your Customer

- Effectively manage risk by educating your 'click happy' email users
- Prevent costly downtime with frequent, effective, and random Phishing Security Tests
- Team up with HPN security engineers and state of the art training software
- Identify learning opportunities through several remedial training options in case an employee falls for a simulated phishing attack
- We will share your end-user progress in identifying phishing attempts and the training they receive
- Gain awareness of your risk score related to your industry with pre/post testing data
- Save time with an Outlook plug-in that allows users to easily report a suspicious email to your email administrator

### What's Included with SATAaS?

- Configuration and ongoing management of the Security Education Training solution
- Dedicated/Unlimited access to HPN support desk for SATAaS related inquiries
- Regular, best practice phishing campaigns
- Active Directory integration guidance
- White listing guidance
- Customized notifications that confirm a successfully reported test phishing email to users
